Summary

Java/Spring Developer with **2 years of experience** in the complete software development lifecycle (**Full Stack**), specializing in building **robust RESTful APIs** and optimizing systems based on **MySQL and Spring Boot**.

My strategic focus centers on **Data Integrity** and **Code Maintainability**. I have designed and implemented self-managed solutions for business problems, including an **Order Management System** (reducing processing time) and an **Email Notification Service** via web forms.

Core Competencies:

- **Backend & Core:** Java (clean code, OOP), Spring Boot (Security, Data JPA), REST APIs.
- **Data:** Relational Database Design/Modeling, SQL, MySQL.
- **Frontend & DevOps:** Angular, Git/GitHub, Cloud Deployment (OCI, Render), Jenkins, Docker.

I seek to apply the **collaboration and results-driven mindset** (acquired through non-technical training) to solve complex technical challenges and scale products in a professional environment.

Development Experience (2023 - Present)

Back-End Developer | Order Management System - BrotesAPI (Java/Spring/MySQL)

- Led the design and development of an **Order Management System** for a local venture, utilizing **Java** and **Spring Boot (Backend)** and **Angular (Frontend)**.
- **Impact:** The system is expected to **reduce order processing time by 30%** and eliminate data integrity errors through robust validations.

- Implemented an **automatic generation system for delivery notes** (*remitos*), enhancing operational efficiency.

Back-End Developer | Email Notification Service - EmailSender (Spring Boot)

- Designed and deployed a **Spring Boot application** focused on **scalability and maintainability** to manage the automated sending of contact forms and email notifications.

Independent Web Developer | 2023 - 2024

- Design, development, and implementation of the website: payasomarote.com
 - Design, development, and implementation of the website: flakiny.com
